Key Programming Software update compatible with FIAT* ADS2185 - Code D751942AD

September 2023

First to market solution

Advanced Diagnostics is pleased to announce an exclusive update to the ADS2185 Fiat* software to programme bladed, remote keys for the popular Fiat* Panda model 169 entirely via OBD. The software works together with the new Silca Remote Key SIP22R33 launched at the same time.

What does the software do?

The ADS2185 programs remote keys for the 2003 to 2011 Fiat* Panda even in an all keys lost situation. The software reads the precoding for both the transponder and remote which is then written to the SIP22R33 key only via the Smart Aerial+. The transponder and remote are programmed separately during this procedure.
All the existing keys and remotes must be erased before programming new ones.

What else is needed?

Smart Pro

Silca Remote Car Key SIP22R33

Smart Aerial+
